DRTConfidence™

Reach the Cloud.

Accelerate ATO... with Confidence!

Accelerate ATO | Reduce Manual Documentation | Finalize FedRAMP Assessments in OSCAL

DRTConfidence™

Empowering 3PAOs and CSPs

DRT Confidence is the OSCAL ready solution that enables Cloud Service Providers (CSPs) and Third-Party Assessment Organizations (3PAOs) to document and automatically generate FedRAMP compliant OSCAL based ATO packages today.

FedRAMP Authority to Operate (ATO) process innovations have finally arrived.

Security assessments and authorizations are extremely time consuming. FedRAMP's (Federal Risk and Authorization Management Program) goal is to reduce end-to-end authorization and review timelines through automation.

The FedRAMP Program Management Office (PMO) in collaboration with the National Institute of Standards and Technology (NIST), has released FedRAMP-specific Open Security Controls Assessment Language (OSCAL) based Security Authorization Package guidelines.

The new OSCAL standard allows FedRAMP to automate security package review and empowers CSPs and 3PAOs to conduct self-validation prior to package submission.

FedRAMP is accepting OSCAL based ATO packages today. As such, DRT Confidence empowers 3PAOs and CSPs to:

- Reduce overall assessment costs and time to prepare ATO Packages
- Automatically generate FedRAMP compliant OSCAL files
- Conduct FedRAMP validations prior to submission
- Digitize and Standardize A&A artifacts
- Improve collaboration among all stakeholders (CSP, 3PAO, and FedRAMP)
